

Datasheet

War Room delivers a closed and private video conferencing and meeting solution that secures the exchange and privacy of information shared between trusted participants without fear of eavesdropping or data breaches.

WHY WAR ROOM?

PROTECT SENSITIVE AND CONFIDENTIAL DISCUSSIONS

Customers choose War Room to protect sensitive and confidential discussions. All communications are encrypted and removed from any public access, protecting the information that is exchanged. War Room ensures data privacy and compliance requirements can be achieved to protect your communications.

PREVENT ZOOM BOMBING

Meeting links are only accessible by authorized and authenticated participants given access by the meeting host. Zoom bombing is eliminated, since having the meeting link does not give someone access to the meeting. Unauthorized participants are automatically blocked from joining and the meeting will look like the it does not exist.

COLLABORATE WITH EXTERNAL STAKEHOLDERS

War Room enables collaboration with trusted partners, contactors, clients, and customers while offering security and protection over meeting discussions. Schedule or create a meeting on-demand to have a private discussion with a select group of trusted stakeholders.

PATENTED SECURITY

War Room is secured by the VirnetX One platform and leverages Secure Domain Names and VirnetX patented technology to offer a meeting solution built around security.
